

Do you want to perform these actions?

Terraform will perform the actions described above. Only 'yes' will be accepted to approve.

Template interpolation syntax is still used to construct strings from

to templates that consist entirely of a single interpolation sequence.

expressions when the template includes multiple interpolation sequences or a mixture of literal strings and interpolations. This deprecation applies only

Enter a value: yes

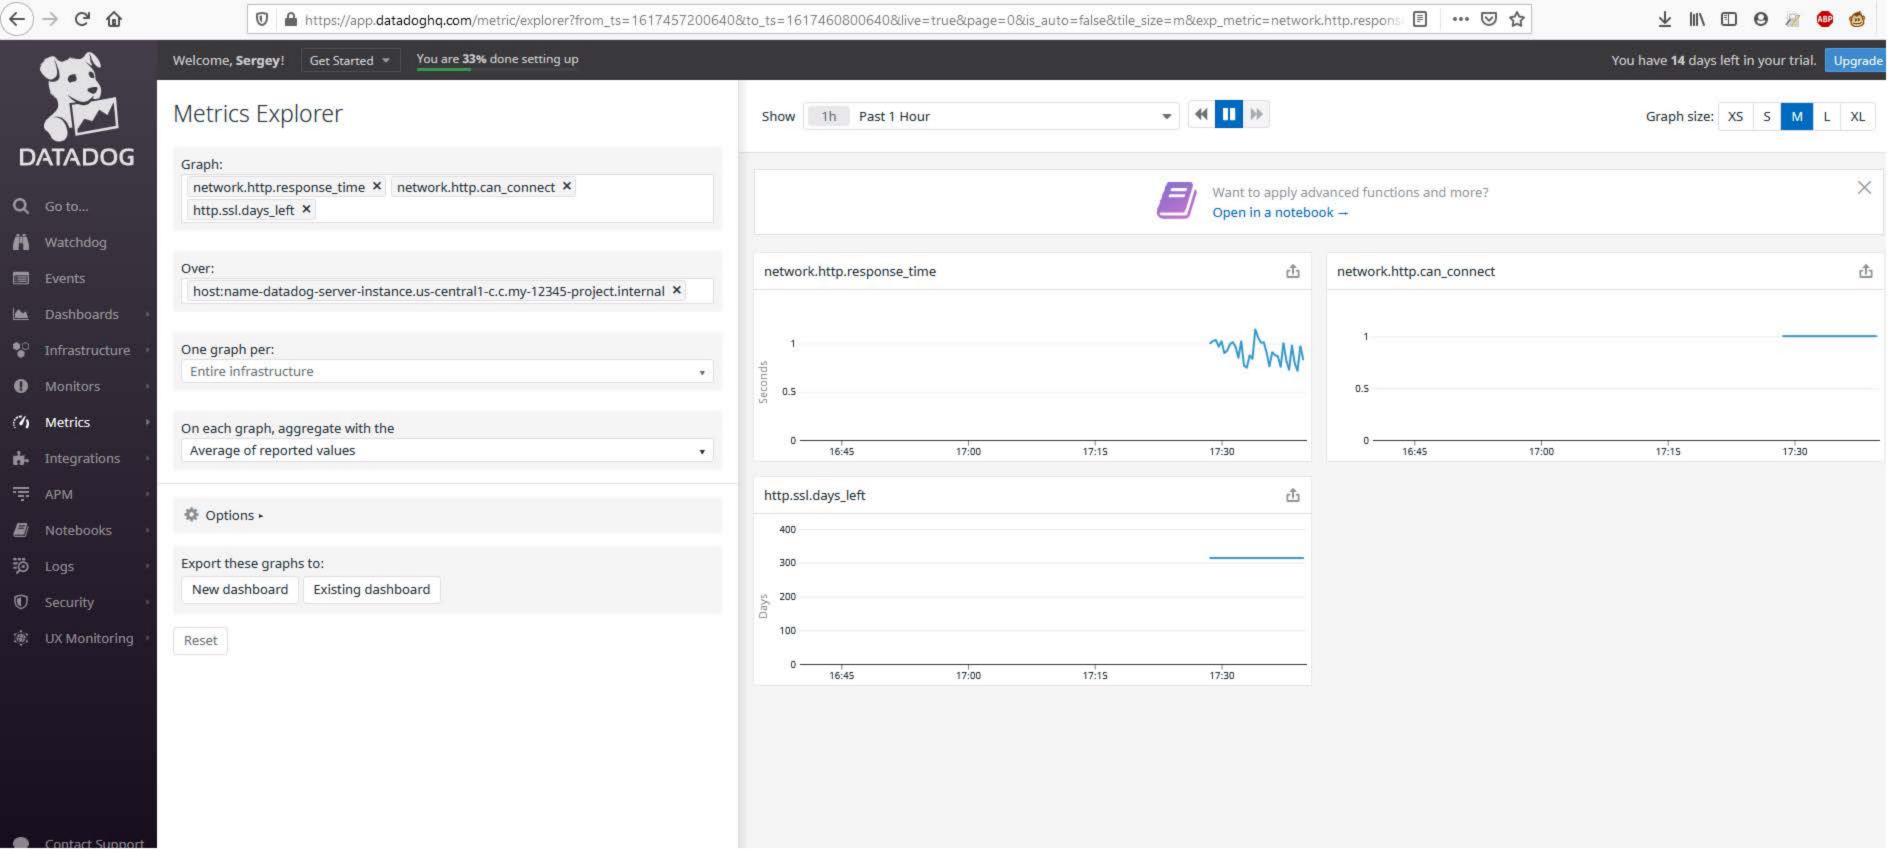

Outputs:

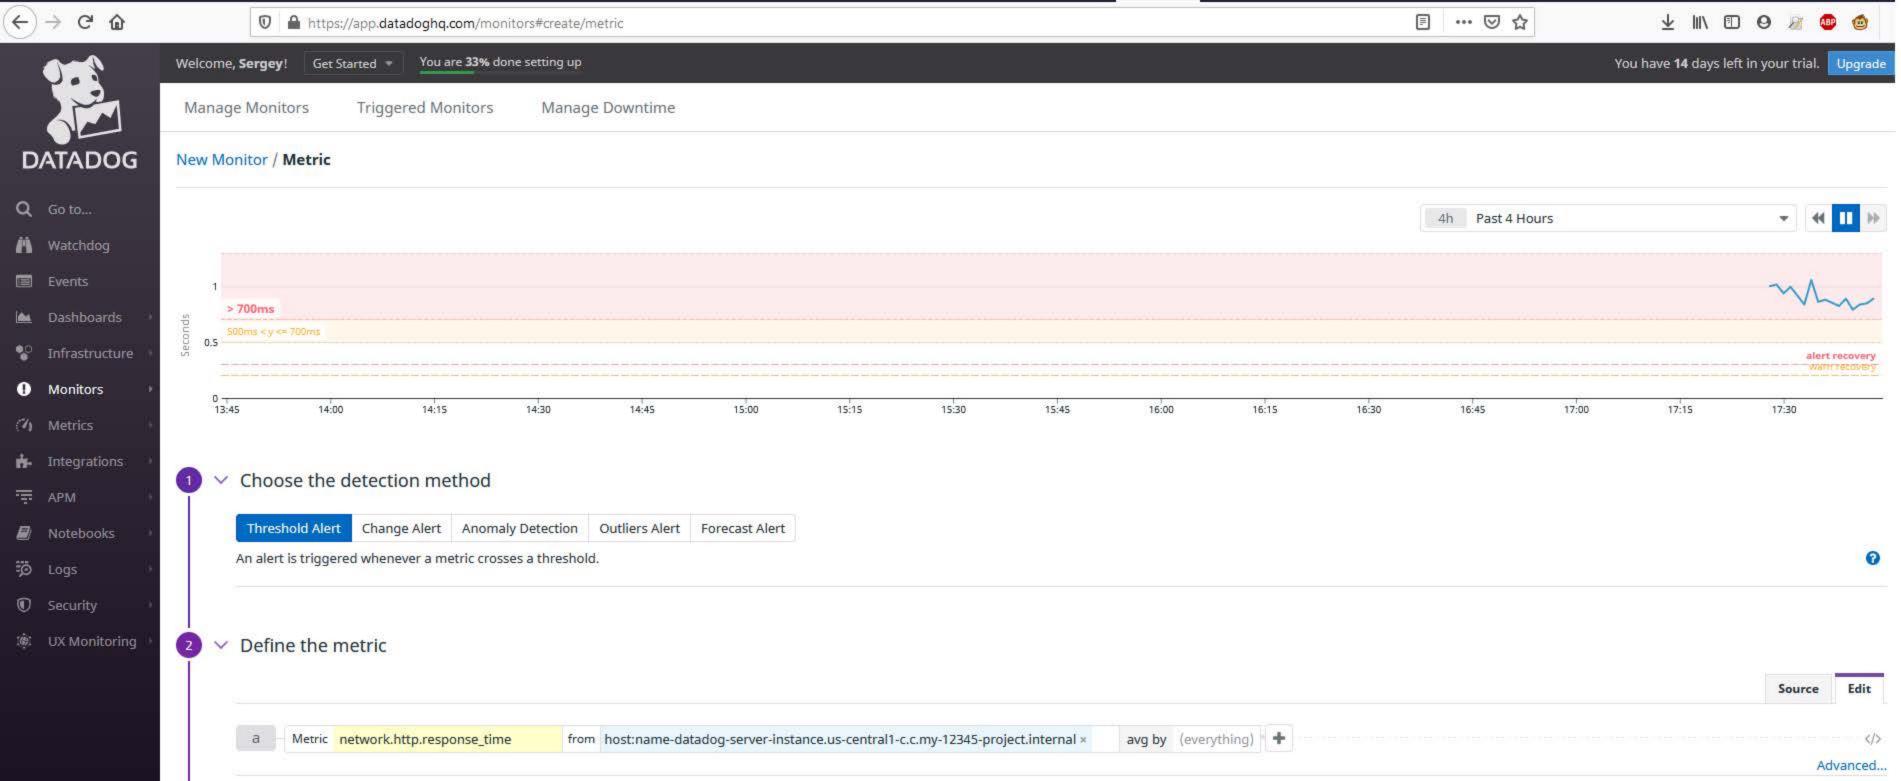

Datadog = "34.67.127.86"
